-! FUNCTION: Cytochrome c oxidase is the component of the respiratory chain that catalyzes the reduction of oxygen to water. Subunits 1-3 form the functional core of the enzyme complex. Subunit 2 transfers the electrons from cytochrome c via its binuclear copper A center to the bimetallic center of the catalytic subunit 1.
--- CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PROSITE; PS00078; COX2; PARTIAL.

Bacteriol. 183:1853-1861(2001).

-I- FUNCTION: Known to be required for the assembly of 30S particles and may also be responsible for determining the conformation of the 16S rRNA at the A site (By similarity).

-I- SIMILARITY: BELONGS TO THE S14P FAMILY OF RIBOSOWAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

-!- FUNCTION: Carrier of the growing fatty acid chain in fatty acid biosynthesis (By similarity).

-!- PATHWAY: De novo fatty acid biosynthesis.

-!- PTM: 4'-phosphopantetheine is transferrated from CoA to a specific serine of the apo-ACP-like protein (Potential).

-!- SIMILARITY: Contains I acyl carrier domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hypothetical protein; Fatty acid biosynthesis; Phosphopantetheine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mol. Cell. Biol. 20:7943-7954(2000).
-!- FUNCTION: Involved in pre-mRNA splicing. Binds and is required for the stability of sn-RNA U1, U2, U4 and U5 which contain a highly conserved structural motif called the Sm binding site. Involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SUBCINIT: Component of the Sm core complex, present in spliceosomal snRNP U1, U2, U4/U6 and U5. The core complex contains SMB1, SMD1, SMD2, SMD3, SMB1, SMR2 (Sm proteins B, D1, D2, D3, E, F and G, respectively), and is probably a heptameric ring structure. SMB1 specifically interacts with SMX2 and SMX3. SUBCELLULAR LOCATION: Nuclear and cytoplasmic. SIMILARITY: Belongs to the SNRNP Sm proteins family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Composition and functional characterization of the yeast spliceosomal

Bubmitted to GenBank, April 2001
A; Description: Sulfolobus solfataricus complete genome.
A; Reference number: A99139
A; Reterence number: A99139
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-76 < KUR>
A; Cesession: H90332

partial transposase ISC1190 [imported] - Sulfolobus solfataricus
C;Species: Sulfolobus solfataricus
C;Species: Sulfolobus solfataricus
C;Date: 24-May-2001 #sequence_revision 24-May-2001 #text_change 24-May-2001
C;Accession: H90329
R;She, Q.; Singh, R.K.; Confalonieri, F.; Zivanovic, Y.; Allard, G.; Awayez, M.J.; Changong, I.; Jeffries, A.C.; Kozera, C.J.; Medina, N.; Peng, X.; Thi-Ngoc, H.P.; Redder, Jong, II.; Jeffries, A.C.; Sensen, C.W.; Van der Oost, J.
arrett, R.A.; Ragan, M.A.; Sensen, C.W.; Van der Oost, J.
A;Description: Sulfolobus solfataricus complete genome.
A;Reference number: A99139
A;Reterence number: A99139
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-88 «KUR>
A;Cross_references: GB:AE006641; NID:g13814935; PIDN:AAK41895.1; GSPDB:GN00155
C;Genetics:
A;Genetics:
A;Gene: SSO8687
A;Cross-references: EMBL:D26185; NID:9467326; PIDN:BAA65259.1; PID:d1005801; PID:9467413
A;Note: the nucleotide sequence was submitted to the EMBL Data Library, December 1993
